### About this piece

**Brass ceiling light** by **General Electric Company (GEC)**, *Arts and Crafts* movement, **c.1910**, with three curved branches and period-style rewiring.

This **brass ceiling light**, made by the **General Electric Company (GEC)** during the *Arts and Crafts* movement **c.1910**, exemplifies the firm's precision metalwork and early twentieth-century domestic fittings. The design centres on a tall turned and cast brass stem of baluster profile, from which three curved arms extend symmetrically to support pendant lampholders.

Each branch terminates in a lampholder suspended by woven cable finished in period-correct braid. The upper section features a loop and hook for ceiling suspension, while the shaft is composed of alternating turned and moulded sections tapering to a small finial. The brass surface retains a mellow tone consistent with age.
